st johns phd clinical psychology: Handbook of Training and Supervision in Cognitive Behavioral Therapy Mark D. Terjesen, Tamara Del Vecchio, 2023-09-08 This book provides a scientific and practical guide for training and supervision in cognitive behavioral therapy (CBT). It builds on more general fundamentals of clinical supervision with a theory-driven approach backed by empirical support for training and supervising clinicians in the practice of CBT. The book dispels the myth of "do it, teach it" as it relates to supervision and addresses the importance of recognizing that one size does not fit all with CBT supervision. The volume synthesizes CBT research on supervision and links it to the practice of supervision. It reviews components of supervision that warrant consideration (e.g., therapeutic alliance, ethics), specific settings (e.g., medical setting, schools) and clients (e.g., culture, individual, group, disability, and high-risk). In addition, it addresses a neglected area of developing competency, including developmental models as well as measuring trainee and supervisor competency in the provision of clinical supervision. The book recommends future directions on how to integrate technology into supervision to enhance the quality of supervision and, ultimately, client outcome. Key areas of coverage include: Major constructs in CBT supervision and training. Supervising work with various clients, including individuals, children, adolescents, families, and couples. Supervision and high-risk cases. Teaching and supervision within a behavioral medicine context. Issues of diversity, technology, and ethics of supervision. The Handbook of Training and Supervision in Cognitive Behavioral Therapy is an essential resource for researchers, professors, and graduate students as well as clinicians, therapists, and other professionals in clinical and school psychology, pediatrics, social work, developmental psychology, behavioral therapy/rehabilitation, child and adolescent psychiatry, nursing, and special education.

st johns phd clinical psychology: Couples Connecting Barbara Jo Brothers, 2013-11-05 Help clients grow into loving commitment! Making and keeping commitments is more difficult today than ever. About half of all marriages end in divorce, and serial monogamy is not uncommon. Couples Connecting: Prerequisites of Intimacy identifies the cultural and personal attitudes that impede commitment and impair intimacy, and it gives you the therapeutic tools to work with clients who don't know how to build a lasting love. Couples Connecting examines why past theories of self-actualization are now failing. Because our culture emphasizes individualistic values, people do not learn how to create and share bonds with others. Therapists must become developmental partners for clients who need to overcome failures of maturation in order to have successful, loving relationships with their partner. This essential guide offers you practical techniques and case studies, as well the theoretical underpinnings to deal with this crisis of intimacy. Couples Connecting provides specific, insightful studies on overcoming obstacles to genuine commitment, including: identifying patterns of anger in distressed and nondistressed couples ways to help engaged couples overcome the fear of following negative family patterns using family systems theory and psychodynamics to understand developmental issues in marriage suggestions for clinical practice with couples who fear intimacy implications of ten essential factors in intimacy Couples Connecting will help you design and use techniques to promote personal growth and bridge gaps between clients to help couples achieve satisfying and intimate relationships.

st johns phd clinical psychology: Evidence-Based Interventions for Students with Learning and Behavioral Challenges Richard J. Morris, Nancy Mather, 2008-01-14 This book assembles into one volume summaries of school-based intervention research that relates to those who deal on a regular basis with the growing body of students having high-incidence learning disabilities and/or behavior disorders: special educators, school psychologists, and clinical child psychologists. Chapter authors begin with an overview of their topic followed by a brief section on historical perspectives before moving on to the main section – a critical discussion of empirically based intervention procedures. In those instances where evidence-based prescriptions can legitimately be made, authors discuss best practices and the conditions (e.g., classroom environment, teacher expertise) under which these practices are most effective. A final section deals with policy issues.

st johns phd clinical psychology: The Psychology of Black Boys and Adolescents Kirkland C. Vaughans, Warren Spielberg, 2014-06-30 Drawing on personal insights and research-based knowledge, this important work facilitates understanding of the psychological struggles of young African American males and offers ameliorative strategies. Despite examples set by successful black men in all walks of life, the truth remains that a disproportionate number of black boys and young men underperform at school, suffer from PTSD, and, too often, find themselves on a pathway to jail. The two-volume *The Psychology of Black Boys and Adolescents* marks the first attempt to catalog the many psychological influences that can stack the deck against black male children—and to suggest interventions. Bringing together an expansive collection of new and classic research from a wide variety of disciplines, this set sheds light on the complex circumstances faced by young black men in the United States. Contributions by authors Kirkland Vaughans and Warren Spielberg contain insights from the groundbreaking Brotherman study, conducted over a ten-year period to report on the lives and psychological challenges of over a hundred African American boys and their families. Among the myriad issues studied in this set are the often-negative expectations of society, the influence of gangs, and the impact of racism and poverty. Of equal importance, the work explores culturally specific ways to engage families, youths, communities, and policymakers in the development of healthy, safe, educated boys who will become whole and successful adults.

st johns phd clinical psychology: *A Minyan of Women* Beverly A. Greene, Dorith Brodbar, 2013-09-13 This book explores the diverse manner in which family dynamics shaped Jewish identities in ways that were unique and directly connected to their experiences within their families of origin. Highlighted is the diversity of experience of ethnic identity within members of a group of women who are similar in many respects and who belong to an ethnic group that is often invisible. Jewish people, like members of other ethnic groups are often treated as if their identities were homogeneous. However, gender, social class, sexual orientation, factors surrounding immigration status, proximity of family members to the holocaust or pogroms, the number of generations one's family has been in the US and other salient aspects of experience and identities transform and inform

the meaning and experience by group members. The book explores these diversities of experience and goes on to highlight the way in which the intermingling of family dynamics and subsequent Jewish identity in these women is manifested in the practice of psychotherapy. In 2012, the book had been awarded the Jewish Women Caucus of the Association for Women in Psychology Award for Scholarship, for that year. This book was published as a special issue of *Women and Therapy*.

st johns phd clinical psychology: Diversity in Couple and Family Therapy Shalonda Kelly, 2016-12-12 This unprecedented volume provides a primer on diverse couples and families—one of the most numerous and fastest-growing populations in the United States—illustrating the unique challenges they face to thrive in various cultural and social surroundings. In *Diversity in Couple and Family Therapy: Ethnicities, Sexualities, and Socioeconomics*, a clinical psychologist and couples and family therapist with nearly two decades' experience leads a team of experts in addressing contemporary elements of diversity as they relate to the American family and covering key topics that all Americans face when establishing their identities, including racial and ethnic identity, gender and sexual orientation identity, religious and spiritual identity, and identity intersections and alternatives. Moreover, it includes chapters on cross-cultural assessment of health and pathology and tailoring treatment to diversity. Every chapter includes vignettes that serve to illustrate the nuances of and solutions to the concerns and issues, as well as the strengths and resilience often inherent in diverse couples or families. Effective methods of coping with stereotypes, intergenerational trauma, discrimination, and social and structural disparities are presented, as are ways to assess and empower couples and families. This text includes experiences and traditions of subgroups that typically receive little attention from being seen as too common, such as white and Christian families, or from being seen as too uncommon, such as couples and families from specific Native American tribes and multiracial couples and families. Thus, it addresses the curricular changes needed to master the diversity found in contemporary American couples and families. The text offers a holistic perspective on diverse couples and families that is consistent with the increasing prominence of models that transcend individual diagnoses and biology to include social factors and context. Theory, policy, prevention, assessment, treatment, and research considerations are included in each chapter. Topics include African American, Asian American, Latino, Native American, white, biracial/multiracial, intercultural, LGBT, Christian, Jewish, and Muslim couples and families as well as diverse family structures. The depth of every chapter includes attention to subgroups within each category, such as African American and Caribbean couples and families, as well as those who represent the intersection between varying oppressed identities, such as an intercultural gay family, or a poor, homeless interracial couple. Additionally, each chapter provides a review section with condensed and easy-to-understand summaries of the key take-away lessons.

st johns phd clinical psychology: Handbook of Violence Risk Assessment and Treatment Joel T. st johns phd clinical psychology: Trauma Psychology Elizabeth K. Carll Ph.D., 2007-08-30 These volumes by a team of internationally recognized experts reflect and highlight both recognized and under-recognized events that cause trauma. They also examine current and emerging research on effective interventions to minimize and heal the effects of the trauma. Special attention is also given to culture and context, because what is considered healthy or problematic may vary widely across cultures, and culture can influence people's coping styles. Sources of trauma discussed include stalking, killing, terrorism, torture, kidnap, workplace violence, domestic violence, children and war, fires, floods, AIDS, pain, burns, spinal cord injury, children and medical illness, homelessness, and more. Case examples, treatment recommendations, and public policy recommendations are included in each of the chapters. The growing field of trauma psychology has been spurred recently by natural events from Hurricane Katrina to the Tsunami, and by terrorist events worldwide, as well as chronic health and social issues—from persistent pain to homelessness—that are mounting. The experts offer a gripping overview of the most traumatic and widespread events causing trauma and of the symptoms and health impairment that may result. st johns phd clinical psychology: *Making Families Work and What To Do When They Don't* Terry S Trepper, Bill Borchardt, 2013-02-01 *Making Families Work and What To Do When They Don't* offers specific recommendations for increasing family harmony through more effective parenting practices. This important new book helps parents improve family understanding and relationships by reducing the emotional interference--anger, betrayal, guilt, shame, and fear--that blocks healthier and happier family connections. Each chapter is laced with knowledge and therapeutic humor that examine dimensions to family living in a way that helps parents lighten up a little rather than tighten up a lot. Parents will find that encouraging family members to take one another less seriously increases their opportunities for more constructive interactions. Marital and family counselors, social workers, psychologists, guidance counselors, psychiatrists, and other human service professionals can use the valuable information in this book to help families view their interfamilial relationships more objectively and to take each other less seriously, creating more constructive interactions and happier, stronger relationships. Therapists will learn to encourage clients to question and challenge conventional ideas of the family that often lead to demands, exaggerations, irrational expectations, personalizations, and self- and other judgments, all of which contaminate the family relationship. Using the scientific principles of rational thinking, Author Bill Borchardt questions the relationship between parents and their children and the degree of influence parents have over their children. He places the focus on a parental advocacy model by which parents are encouraged to give themselves some emotional slack and to develop a sense of humility for what they can and cannot do for their children. This starts the process of family members learning what to realistically expect and accept from one another. Borchardt shows readers that by taking the sacredness and "golden" rules out of the definitions of family living, emotional upset and oppositional behavioral obstacles can be minimized and more emotional well-being and family fulfillment can be experienced. Each chapter in *Making Families Work and What To Do When They Don't* is lined with knowledge and therapeutic humor that examines dimensions of family living in a way that assists families in loosening up a little rather than tightening up a lot. This improves family members' understanding of and relationships among one another by reducing the emotional interference--feelings of anger, betrayal, guilt, shame, fear--that blocks healthy, happy family connections and by offering specific practical recommendations for increasing family harmony. Through his analyses of 30 topics of family living, presented under the umbrella of learning what to realistically expect of imperfect parents of imperfect children in an imperfect world, Borchardt reveals to readers that: individuals are active participants in creating their own emotional problems and disturbances people exaggerate the significance of past family disturbances emotional slack and fewer unrealistic demands of self and others leads to a happier family family members often disturb themselves unnecessarily by escalating family values into sacred demands families don't shape character, they reveal it Unlike other books about family living, *Making Families Work and What To Do When They Don't* analyzes the dysfunctional ideas that family members hold about themselves and others rather than the dysfunctional relationships that naturally exist between fallible human beings. In this guidebook, readers learn creative, new ways of approaching old family problems, and they gain succinct explanations of how they can help their own and other families do things differently and do different things to improve emotional and behavioral well-being within the family.

st johns phd clinical psychology: *Principles of Multicultural Counseling and Therapy* Uwe P. Gielen, Juris G. Draguns, Jefferson M. Fish, 2008-06-19 In an era of globalization characterized by widespread migration and cultural contacts, psychologists, counselors, and other mental health professionals face a unique challenge: how does one practice successfully when working with clients from so many different backgrounds? Gielen, Draguns, and Fish argue that an understanding of the general principles of multicultural counseling is of great importance to all practitioners. The lack of this knowledge can have several negative consequences during therapy, including differences in expectations between counselor and client, misdiagnosis of the client's concerns, missed non-verbal cues, and the client feeling that she has been misunderstood. This volume focuses on the general nature of cultural influences in counseling rather than on counseling specific ethnic groups.

Counseling practices from all over the world, not just those of Western society, are explored. Bringing together the work of a diverse group of international experts, the editors have compiled a volume that is not only concise and teachable, but also an essential guidebook for all mental-health professionals.
